

Kilmarnock FC Environmental Policy

At Kilmarnock FC, we recognise the importance of protecting the environment and are committed to minimising the environmental impact of our operations.

As a professional Scottish football club, we are dedicated to promoting sustainability, reducing waste, conserving energy, and preserving natural resources.

Our Environmental Policy outlines our commitment to environmental stewardship and sets the following goals:

1. **Reduce energy consumption**: We will strive to reduce our energy consumption and carbon emissions by implementing energy-efficient practices and technologies throughout our facilities, including lighting, heating, and cooling systems.
2. **Reduce waste**: We will aim to minimise waste by promoting responsible waste management practices, including reducing, reusing, and recycling. We will also strive to use environmentally friendly materials in our operations and reduce the use of single-use plastics.
3. **Promote sustainable transportation**: We will encourage sustainable transportation methods among our staff, players, and fans, including carpooling, cycling, and the use of public transportation. We will also promote sustainable transportation practices at our events, including the provision of bike racks and the promotion of public transportation options.
4. **Support environmental initiatives**: We will actively support environmental initiatives that align with our values, including tree planting, environmental education, and community-based environmental projects.
5. **Measure and report**: We will measure and report on our progress in achieving our environmental goals, including tracking energy usage, waste generation, and carbon emissions. We will regularly communicate our progress to our staff, players, fans, and stakeholders.

As a professional Scottish football club, we recognise that our actions have an impact on the environment, and we are committed to minimising that impact through sustainable practices and responsible environmental stewardship.
